REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the prior art discloses a system for sensing current from an alternator having an amplifier with an input and output, an input resistor connected to the input signal, a switching element and a processor. However, the prior art fails to show, in combination with the invention, an adjustment resistor and a switching element coupled in series between the input and the output in parallel with the feedback resistor, a processor coupled to the output and being operable, based upon a current indication related to a level of alternator current indicated at the output, to control the operation of the switching element such that the switching element is closed when the current indication increases to exceed a first threshold and the switching element is opened when the current indication decreases to fall below a second threshold and wherein a processing means causes the modification means to step down a gain of the amplification means when the current measurement value exceeds a first threshold and the processing means causes the modification means to step up the gain of the amplification means when the current measurement value falls below at least one of the first threshold and the second threshold and switching a status of the switching element to reduce a gain of the differential amplifier when the measured current values increase from being below a first

threshold to exceed the first threshold and switching the status of the switching element to increase the gain of the differential amplifier when the measured current values fall from above a second threshold to below the second threshold.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
